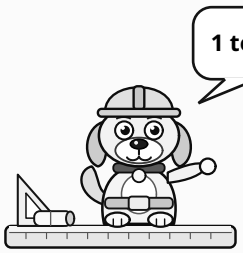
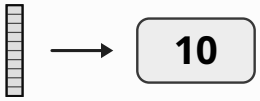
Trace and Write Tens (10 to 100)

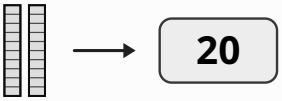
Count the ten-rods on the left, trace the dashed decade number in the middle, then write it yourself and read the number word. Hi, I'm Theo the dog architect! Each tall rod holds 10 unit cubes—count the rods to build every ten up to 100!



Theo's worked example: counting by base-ten rods



1 ten-rod = 10



2 ten-rods = 20

1. Count the ten-rods, trace each dashed decade number, then write it in the ruled box and read the word

Base-10 rods	Trace	Write & read
	10	10 ten
	20	20 twenty
	30	30 thirty
	40	40 forty
	50	50 fifty
	60	60 sixty
	70	70 seventy
	80	80 eighty
	90	90 ninety
	100	100 one hundred

Theo's tip: each rod holds 10 cubes. Count by tens (10, 20, 30…), trace the dashes, and rest digits on the line.
