True or False Equations Within 20

Solve the left side of each equation in your head, check the stated answer, and circle either the True or False badge.

I am Pico the judge fox! Check each calculation carefully and deliver your verdict: is the equation true or false?

Worked example: **9 + 4 = 13** → **True** / False

1. Check all ten equations (A–J) and circle the correct badge

A **8 + 5 = 13** — True / False

B **9 + 6 = 14** — True / False

C **14 − 5 = 8** — True / False

D **16 − 7 = 9** — True / False

E **7 + 7 = 14** — True / False

F **8 + 9 = 16** — True / False

G **18 − 9 = 8** — True / False

H **15 − 8 = 7** — True / False

I **11 + 6 = 17** — True / False

J **6 + 7 = 14** — True / False

Pico's tip: cover the right-hand number first, work out the sum or difference yourself, then compare both sides before circling.
