PAPILUMO | Classe prima (6–7 anni) | Soluzioni

Analogie geometriche: trova la figura

Osserva come cambia la prima figura nella seconda, poi cerchia a destra la vignetta (1), (2) o (3) che segue la stessa regola.

Il detective Zelie il furetto indaga sulle forme: scopri la regola nascosta e cerchia la figura giusta in ogni riga!

Esempio: cerchio diviso in verticale, sinistra grigia -> quadrato con stessa regola.

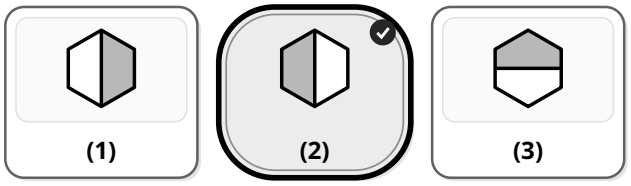

6 indagini logiche: cerchia la figura esatta (1), (2) o (3)

1

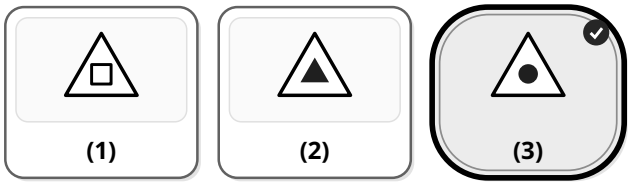

Taglio verticale, metà sinistra grigia

2

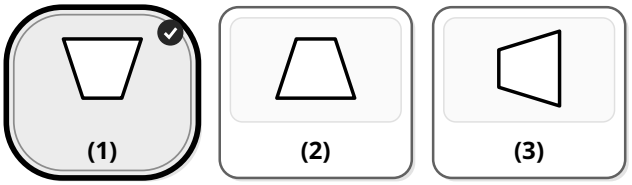

Pallino pieno al centro

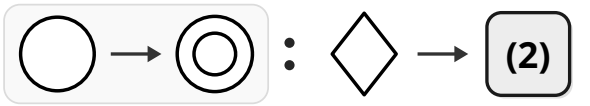

3

Figura capovolta alto-basso

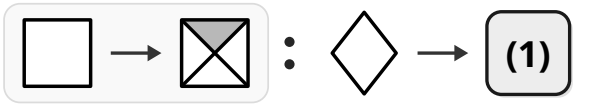

4

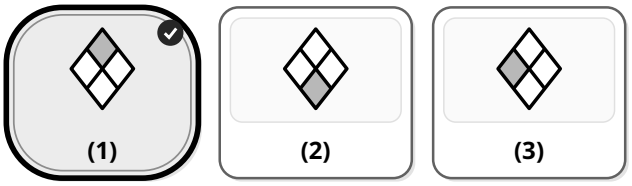

Doppio contorno concentrico

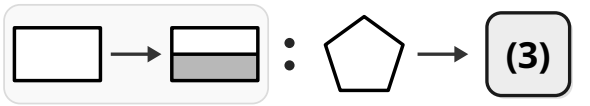

5

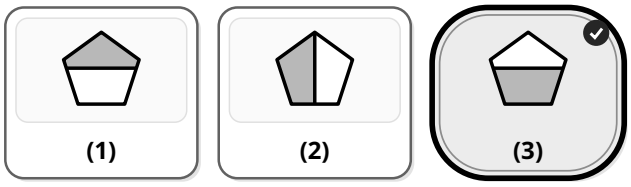

Taglio a X, quarto in alto grigio

6

Taglio orizzontale, metà in basso grigia

Consiglio da detective: racconta prima a voce alta la regola (a metà, capovolta, doppio bordo...) prima di guardare le tre scelte.
