Figure congruenti (forma e misura)

Confronta le figure sui reticoli di punti: cerchia Sì o No nella parte 1, poi cerchia l'UNICA figura congruente in ogni riga.

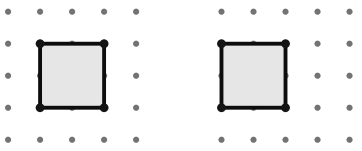

Tao il tucano geometra controlla se due figure hanno esattamente la stessa forma e la stessa misura, anche da ruotate!

Esempio: stessa forma e misura?

1. Confronta la figura A e la figura B sui punti. Cerchia Sì (congruenti) o No:

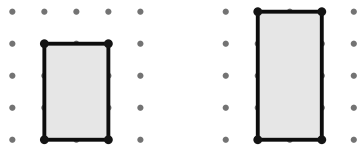

1

Sì / No

2x2 = 2x2

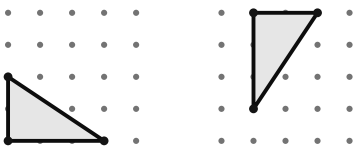

2

Sì / **No**

2x3 != 2x4

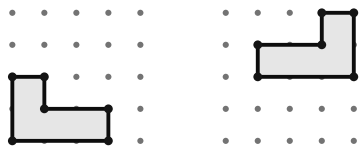

3

Sì / No

3x2 = 3x2

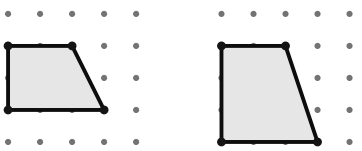

4

Sì / No

3x2 = 3x2

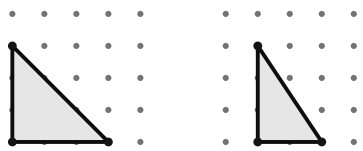

5

Sì / **No**

h=2 != h=3

6

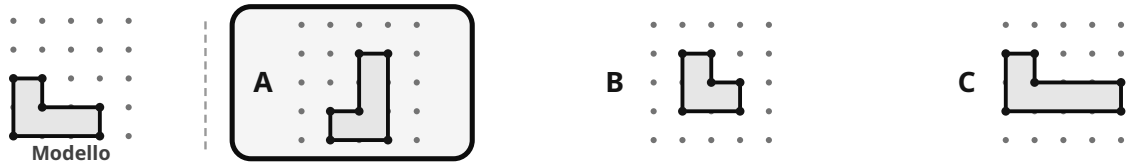

Sì / **No**

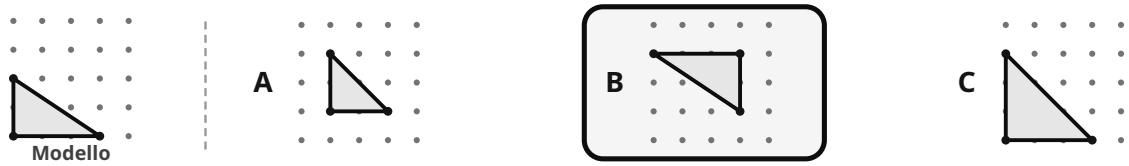

3x3 != 2x3

2. Osserva il modello a sinistra e cerchia l'UNICA figura ruotata congruente (A, B o C):

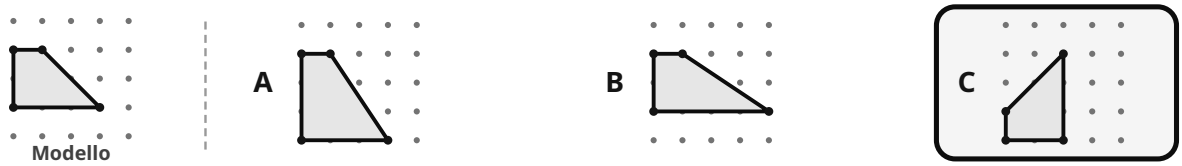

1

2

3

Consiglio di Tao: conta gli spazi tra i punti lungo ogni lato dritto; ruotare una figura non cambia le sue misure!
