Nome : _____ Data : _____

PAPILUMO / Classe terza

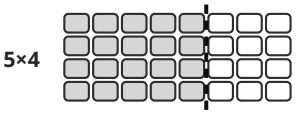

Scomporre per moltiplicare per 8 e per 9

Osserva la linea tratteggiata in ogni griglia, scrivi i due prodotti parziali nelle prime due caselle e sommali per trovare il risultato finale.

Il castoro Sacha divide i pannelli di legno in due parti facili! Spezza ×8 in 5 + 3 e ×9 in 5 + 4 per calcolare senza errori.

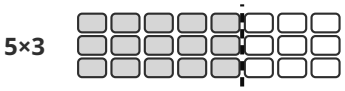

Modello: 8 × 4 = (5×4) + (3×4)

8 × 4 = 20 + 12 = 32

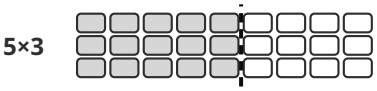

Trova i due prodotti parziali in ogni griglia divisa, poi sommali per ottenere il totale

#1 **8 × 3** **5 + 3**

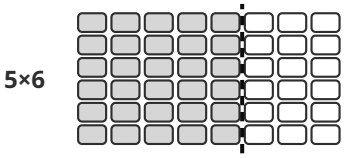

(5 × 3) + (3 × 3) = **(8 × 3)**

#2 **9 × 3** **5 + 4**

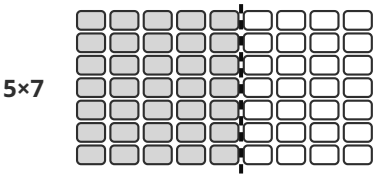

(5 × 3) + (4 × 3) = **(9 × 3)**

#3 **8 × 6** **5 + 3**

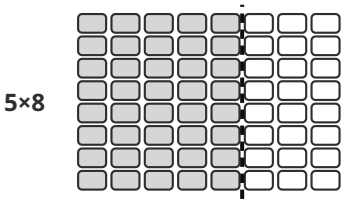

(5 × 6) + (3 × 6) = **(8 × 6)**

#4 **9 × 7** **5 + 4**

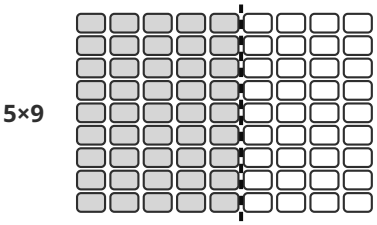

(5 × 7) + (4 × 7) = **(9 × 7)**

#5 **8 × 8** **5 + 3**

(5 × 8) + (3 × 8) = **(8 × 8)**

#6 **9 × 9** **5 + 4**

(5 × 9) + (4 × 9) = **(9 × 9)**

Consiglio di Sacha: parti sempre dalla tabellina facile del 5, poi aggiungi il blocco da 3 o da 4 colonne!
