PAPILUMO / Classe terza • Soluzioni

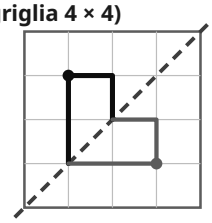

Simmetria con asse diagonale a 45° sui quadretti

Osserva bene la metà in neretto e disegna esattamente la sua parte simmetrica oltre l'asse diagonale tratteggiato.

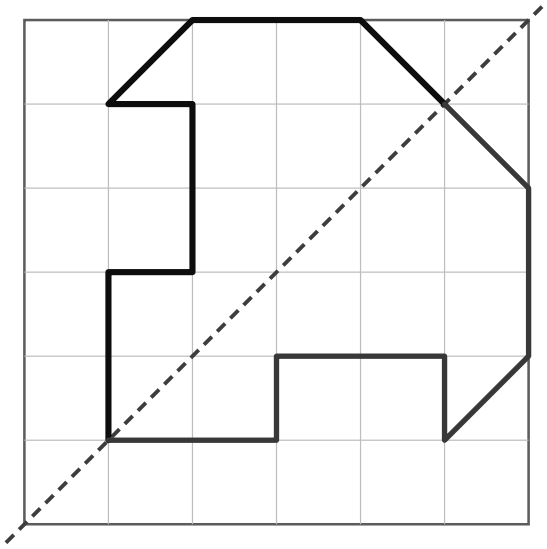

Milo inclina il suo specchietto a 45 gradi! Fai molta attenzione a come ogni passo orizzontale diventa verticale oltre la diagonale.

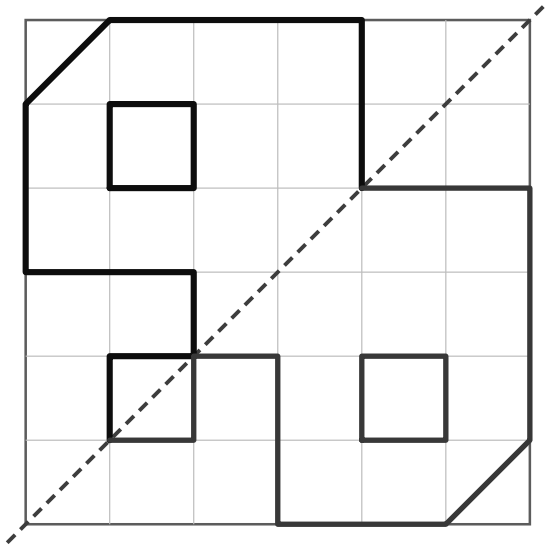

Esempio (griglia 4 × 4)

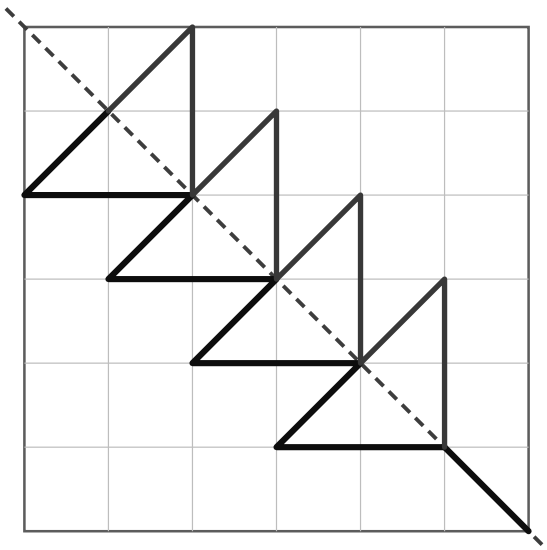

1. Freccia a gradini (asse /)

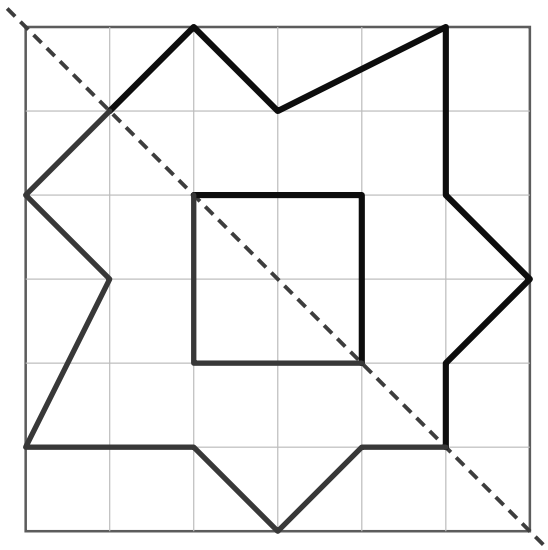

2. Ala di farfalla (asse /)

3. Foglia di pino (asse \)

4. Stella caleidoscopio (asse \)

Consiglio di Milo: ruota appena il foglio per vedere l'asse tratteggiato in verticale quando vuoi controllare un vertice difficile!
