Prénom : _____ Date : _____

PAPILUMO / CE1

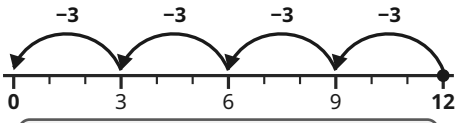

Division jusqu’à 24 : bonds en arrière

Pars du grand nombre sur la droite graduée, trace des bonds égaux en arrière jusqu’à 0, puis écris le nombre de bonds.

Bibi la grenouille veut rentrer sur le nénuphar 0 ! Compte combien de bonds égaux en arrière l’y ramènent exactement.

Exemple : 12 ÷ 3

12 ÷ 3 = 4 (4 × 3)

#1 **10 ÷ 2 =** ☐

10 .. 0 (bonds de −2)

#2 **15 ÷ 5 =** ☐

15 .. 0 (bonds de −5)

#3 **16 ÷ 4 =** ☐

16 .. 0 (bonds de −4)

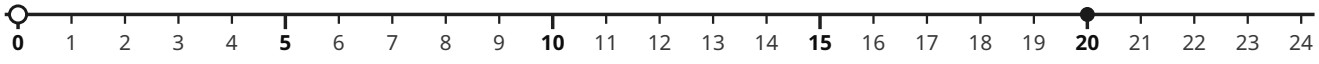

#4 **18 ÷ 3 =** ☐

18 .. 0 (bonds de −3)

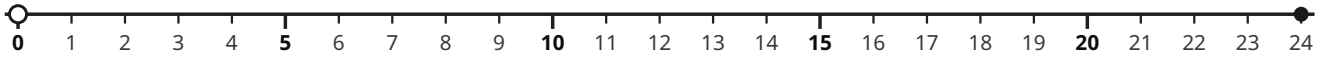

#5 **20 ÷ 5 =** ☐

20 .. 0 (bonds de −5)

#6 **24 ÷ 4 =** ☐

24 .. 0 (bonds de −4)

Astuce de Bibi : vérifie toujours ton dernier bond, il doit atterrir pile sur 0 avant de compter les arcs !
