PAPILUMO / 2.º ano

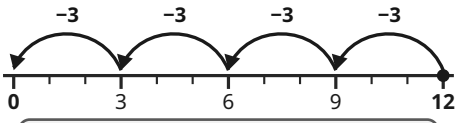

Divisão até 24: saltos para trás

Começa no número maior na reta numérica, desenha saltos iguais para trás até ao 0 e escreve quantos saltos deste.

A rã Bibi quer voltar para a vitória-régia 0! Conta quantos saltos iguais para trás a levam exatamente até lá.

Exemplo: 12 ÷ 3

12 ÷ 3 = 4 (4 × 3)

#1 **10 ÷ 2 =** ☐

10 .. 0 (saltos de −2)

#2 **15 ÷ 5 =** ☐

15 .. 0 (saltos de −5)

#3 **16 ÷ 4 =** ☐

16 .. 0 (saltos de −4)

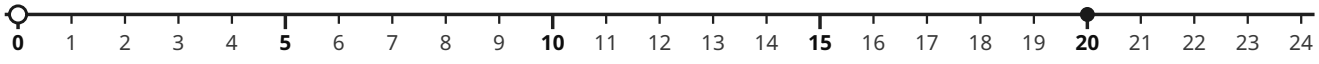

#4 **18 ÷ 3 =** ☐

18 .. 0 (saltos de −3)

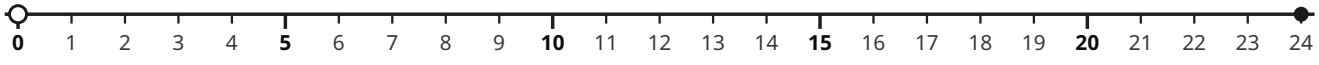

#5 **20 ÷ 5 =** ☐

20 .. 0 (saltos de −5)

#6 **24 ÷ 4 =** ☐

24 .. 0 (saltos de −4)

Dica da Bibi: confirma sempre se o último salto cai exatamente no 0 antes de contares todos os arcos!
